Initial Access

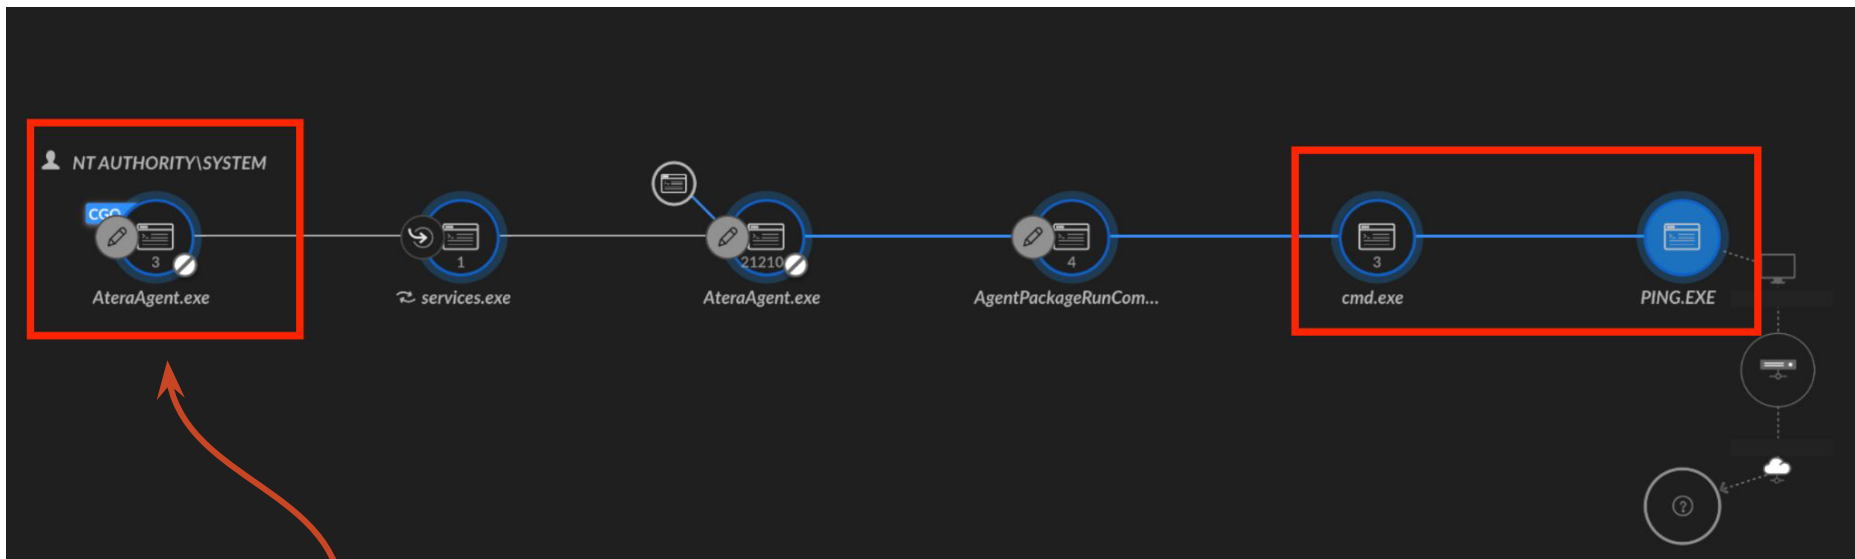

TA looks into buying valid credentials via the dark web

IAB provides stolen helpdesk credentials

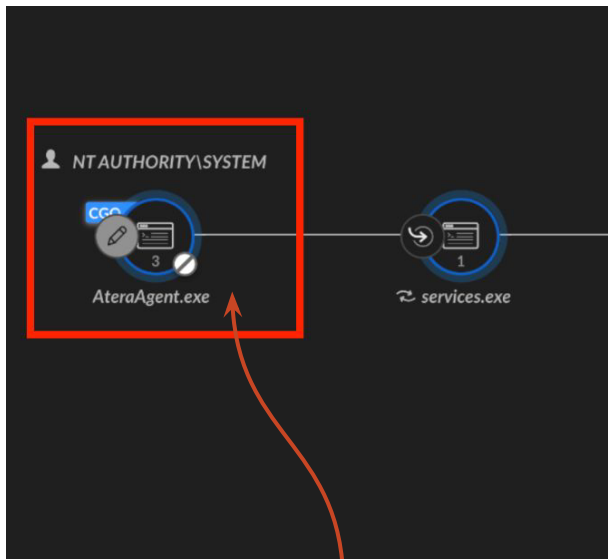

TA successfully acquires helpdesk credentials with access to Atera

Initial Access

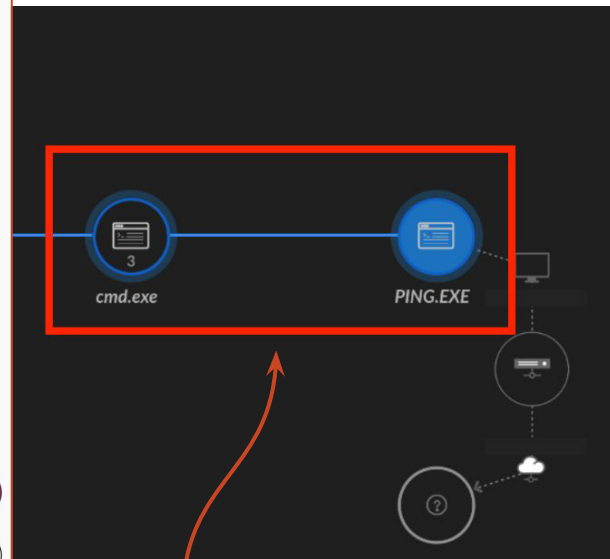

TA purchased a valid credential (helpdesk) on the dark web

Initial Access

TA purchased a valid credential (helpdesk) on the dark web

A screenshot of the Atera management console. At the top, it shows 'All customers' and 'Filters Table settings'. Below that, it says 'Displaying 1 of 0 devices'. There are tabs for 'Available patc...', 'Pending reboot', 'Remote access', and 'Actions'. A 'Manage (3)' button is highlighted, and a dropdown menu is open, showing options like 'Patch Management', 'Software Inventory', 'Software Installation', 'Run Script', 'Service Manager', 'Task Manager', 'Shutdown actions', 'Command Prompt', 'PowerShell', 'User Activity', 'Apps', and 'More Tools'. 'Command Prompt' and 'PowerShell' are highlighted with a red box.

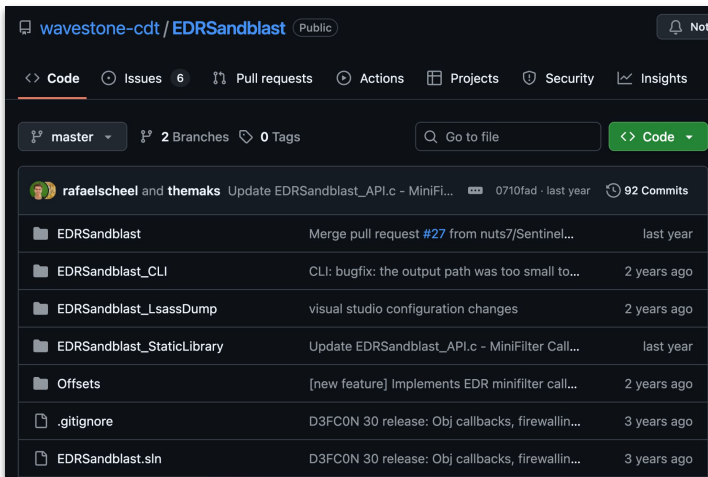

TA performed "ping" command via Atera terminal feature

Threat Actor Communication & Negotiation

Negotiation with the Threat Actor

As I have told you before, I have gained access to the network and downloaded 97 GB of data.

What I want to offer:

- I will provide you with the electronic wallet address
- **<CLIENT> pays \$350,000 to this wallet**
- When I receive payment the data will be deleted
- <CLIENT> gets data deletion log
- <CLIENT> get details of data breach incident if needed
- <CLIENT> never see me again
- Everyone is happy

Otherwise I will have to start terrorizing <CLIENT> social media and disturbing business. That is the plan.

Hello, Sir. **You are doing very good job** over there, but i am afraid this amount is still low. You have just cut 50% from already cutted price. Let's make it at least \$225,000, i can wait until tomorrow.\$125,000 is a good discount; it cuts more than 33.3% off the original price.

We are getting very close to close the deal, a little bit of effort from you and we are finally done with this.

Negotiation with the Threat Actor

Such a tough negotiator you are. Ok, let it be so. I accept BTC. Wallet address to perform the payment would be provided soon.

Initial Demand: \$350,000
Final Demand: \$180,000
Percent Reduction: 46%

Who is selling this Bypass Tool?

Initial Leads: Identifying Potential Aliases

- Discovered suspicious folder names in the `Z:\freelance` directory.
- Pivoted to search these names on cybercrime forums like XSS and Exploit.
- Relevant hits suggested some names were potential threat actor aliases.

Posted in multiple places looking for AV/EDR bypass tools

Translation:
Greetings, everyone!
Does anyone have an out-of-the-box solution to kill antivirus software? I'm ready to purchase several solutions with regular support/subscription.

Thread by *KernelMode* offering AV/EDR bypass tool subscriptions

#1

RU

Продаю av/edr disabler. Основное преимущество - процессы AV\EDR СКАНЕРОВ не завершаются, т.е. ВНЕШНЕ защитное решение продолжает функционировать, но ПО ФАКТУ сканирование файлов\памяти не выполняется.

Работоспособность проверена на windows 7sp1-11, windows server 2008 r2 - 2022 со следующими AV\EDR: Bitdefender, CrowdStrike, Cylance, Palo Alto Networks, Kaspersky, DrWeb, ESET, Avast, Avira, Symantec, Sophos, Sentinel One, TrendMicro, Webroot, Windows Defender 10/11.

Месячная поддержка каждого AV/EDR - 1500\$, минимальный заказ - 7500\$. Если нужного вам AV/EDR нет в списке - пишите, постараемся добавить. Набираю не более 7 клиентов. Гарант приветствуется.

Перед заключением сделки предоставляю видеодемонстрацию с запуском mimikatz и актуальные сканы AV\EDR по scanner.to.

EN

Selling av/edr disabler. The main advantage is that the processes of AV/EDR SCANNERS are not terminated, i.e. externally the protection solution continues to function, but in fact the scanning of files/memory is not performed.

Tested on windows 7sp1-11, windows server 2008 r2 - 2022 with the following AV/EDRs: Bitdefender, CrowdStrike, Cylance, Palo Alto Networks, Kaspersky, DrWeb, ESET, Avast, Avira, Symantec, Sophos, Sentinel One, TrendMicro, Windows Defender 10/11.

Monthly support for each AV/EDR is \$1500, minimum order is \$7500. If the AV/EDR you need is not in the list - write, we will try to add it. I recruit no more than 7 clients. Escrow is welcome.

Before concluding the deal I provide a video demonstration with the launch of mimikatz and current scans AV\EDR on scanner.to.

Selling av/edr disabler. The main advantage is that the processes of AV/EDR SCANNERS are not terminated, i.e. externally the protection solution continues to function, but in fact the scanning of files/memory is not performed.

Tested on windows 7sp1-11, windows server 2008 r2 - 2022 with the following AV/EDRs: Bitdefender, CrowdStrike, Cylance, Palo Alto Networks, Kaspersky, DrWeb, ESET, Avast, Avira, Symantec, Sophos, Sentinel One, TrendMicro, Windows Defender 10/11.

Monthly support for each AV/EDR is \$1500, minimum order is \$7500. If the AV/EDR you need is not in the list - write, we will try to add it.

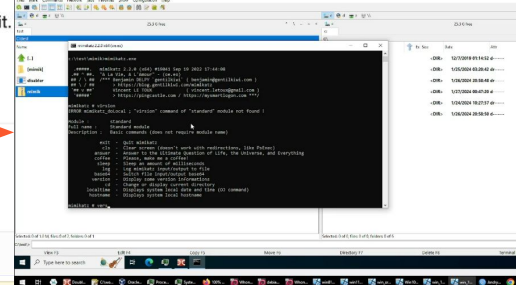

Before concluding the deal I provide a video demonstration with the launch of mimikatz and current scans AV\EDR on scanner.to.

В целом пойдет, допиливаются какие то моменты, старается ускориться. Битдеф\сентик отлетают быстро

Translation:
In general, it will go, finishing some moments, trying to speed up. Bitdef/sentic fly off quickly.

Exactly as the demo video obtained from **KernelMode**

```
$ cat data.txt
al[redacted]7/escrow
43ds
```

Hiding in Plain Sight: Clues in the Recordings

Analysis of Demo Recording

The screenshot displays a Windows 10 virtual machine environment. In the foreground, a command prompt window shows the following commands and output:

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.19044.3930]
(c) Microsoft Corporation. All rights reserved.
C:\Windows\system32>winver
test
C:\Windows\system32>cd c:\test
Name: \test\disabler.exe
C:\test>
```

Overlaid on the command prompt is a security dashboard window titled "DESKTOP-JBAOTJS" (Windows 10 Enterprise 21H2 x64). The dashboard shows the following details:

- OVERVIEW**
- THREAT HISTORY**: 0
- QUARANTINED FILES**: 0
- BLOCKED DEVICES**: 0
- AGENT DETAILS**

The **AGENT DETAILS** section includes:

- Version: [redacted]
- UUID: [redacted]
- Installed at: Sat, 27 Jan 2024 00:06:54
- Last successful upgrade time: N/A
- Last successful least time: Sat, 27 Jan 2024 00:19:51
- Last Console connection time: N/A
- Management Console URL: <https://temp.wash.net>
- Management Console proxy address: N/A
- Visibility Cloud proxy address: N/A

The **CONFIGURATION** section shows:

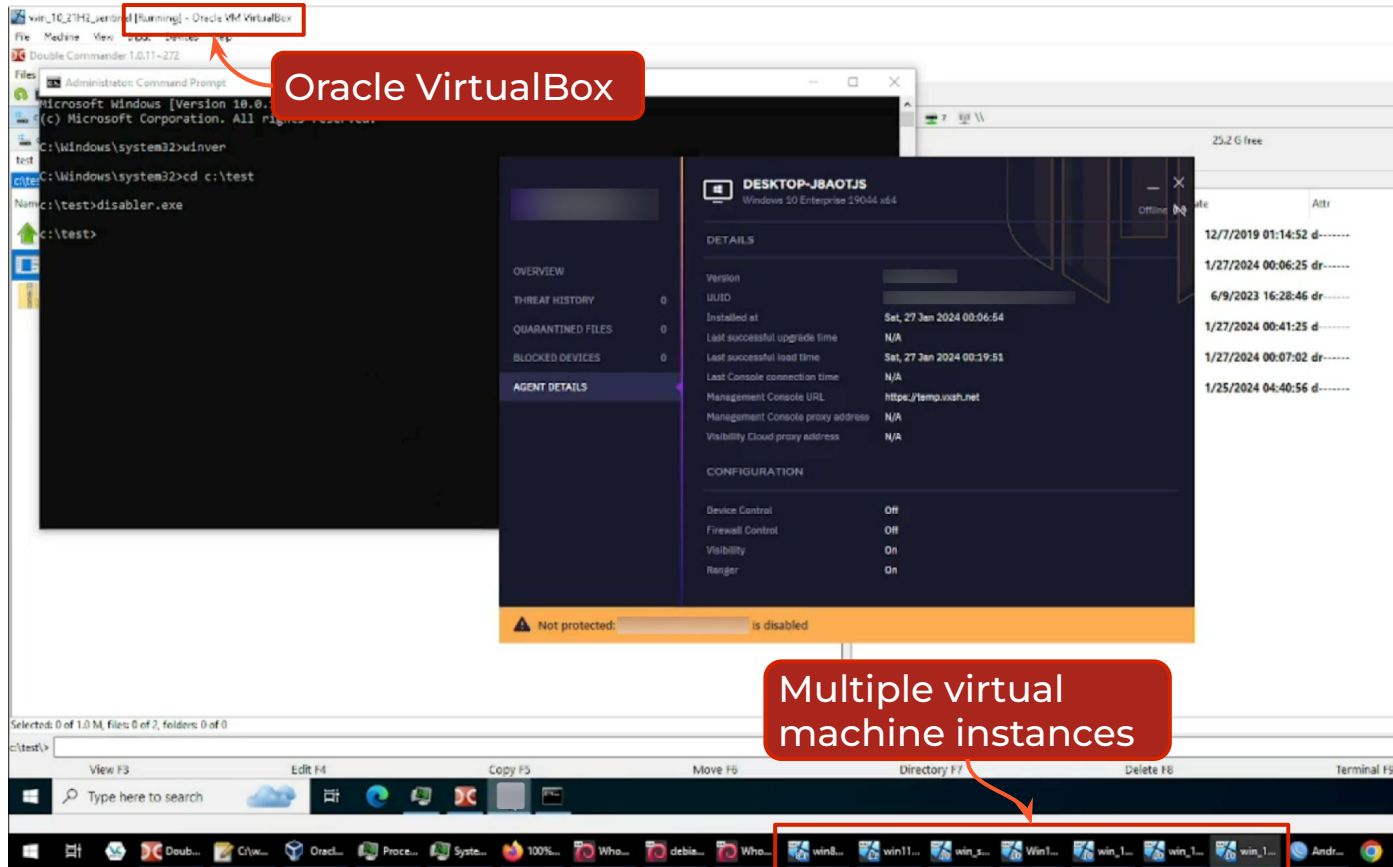

- Device Control: Off
- Firewall Control: Off
- Visibility: On
- Ranger: On

An orange warning banner at the bottom of the dashboard states: "Not protected: [redacted] is disabled".

In the background, a file explorer window shows a directory listing with columns for Name and Attr. The listing includes several files with dates and attributes:

Name	Attr
12/7/2019 01:14:52 d-----	
1/27/2024 00:06:25 dr-----	
6/9/2023 16:28:46 dr-----	
1/27/2024 00:41:25 d-----	
1/27/2024 00:07:02 dr-----	
1/25/2024 04:40:56 d-----	

Analysis of Demo Recording

Analysis of Demo Recording

The screenshot displays the Oracle VM VirtualBox interface. A red box highlights the title bar of the main window: "win_10_27H2_en-us [Running] - Oracle VM VirtualBox".

A red callout box labeled "Oracle VirtualBox" points to the main application window.

A red callout box labeled "Hostname of the rogue system" points to the "Management Console URL" field in the VM details, which contains the value "https://temp.wash.net".

A red callout box labeled "To bypass authentication and install EDR agent?" points to the "AGENT DETAILS" section of the VM details.

A red callout box labeled "Multiple virtual machine instances" points to the taskbar at the bottom, which shows several icons for virtual machines named "win_1...".

The main window shows the details for a VM named "DESKTOP-JBAOTJS" (Windows 10 Enterprise 21H2 x64). The "AGENT DETAILS" section is expanded, showing a table of agent information:

OS	OS	OS	OS
On	On	On	On

The taskbar at the bottom shows multiple instances of virtual machines, with a red box highlighting a group of them.

Analysis of Demo Recording

The image shows a screenshot of the Oracle VM VirtualBox interface. A red box highlights the title bar of the main window: "win_10_27H2_x64 [Running] - Oracle VM VirtualBox".

A red callout box labeled "Oracle VirtualBox" points to the main window area.

A yellow box highlights the VM name "DESKTOP-JBAOTJS" in the VM list. A red callout box labeled "Hostname of the rogue system" points to this name.

A red callout box labeled "To bypass authentication and install EDR agent?" points to the "AGENT DETAILS" section of the VM's configuration page.

A red callout box labeled "THREAT ACTOR??" points to the "Management Console URL" field, which contains the value "https://temp.wash.net".

A red callout box labeled "Multiple virtual machine instances" points to the taskbar at the bottom of the host OS, which shows multiple instances of Windows 10 taskbars.

The background shows a Windows 10 desktop environment with a Command Prompt window open, displaying the following commands and output:

```
Administrator: Command Prompt
C:\Windows\system32>inver
test
C:\Windows\system32>cd c:\test
Name: \test\disabler.exe
C:\test>
```

Analysis of Demo Recording

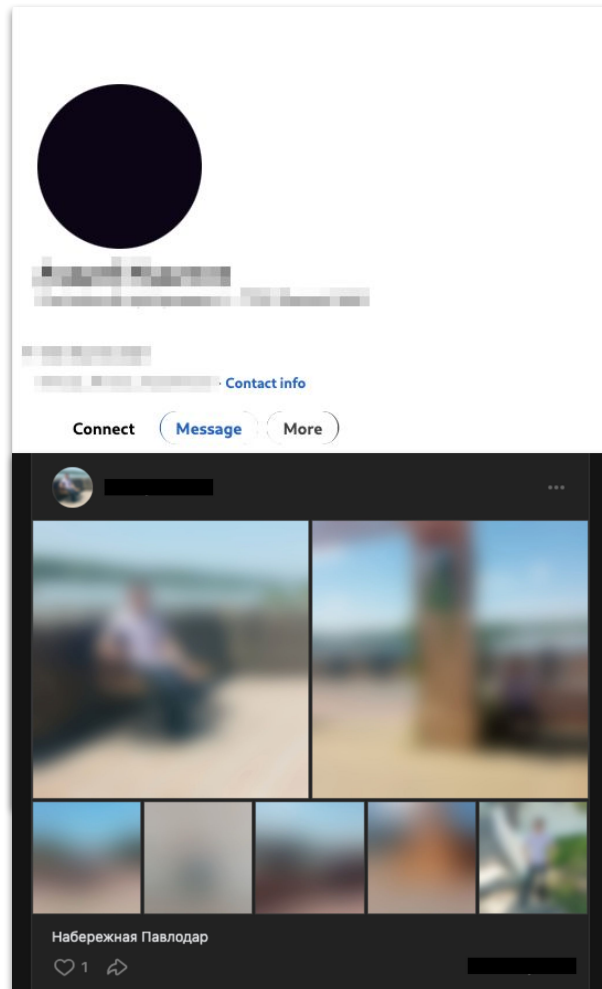

- Another video recording revealed a critical clue: a larger portion of the actor's username was now visible.

Unmasking KernelMode

Unmasking the Actor

- **OpSec Failure:** The demo video and P-1 form exposed two key identifiers: the name "**Andry**" and a specific company.
- **LinkedIn Pivot:** Identified a profile for "Andry" showing employment at the company from the P-1 form.
- **Corroboration:** Found a matching profile on VKontakte (VK), further confirming the individual's identity.

Profiling the Organization

- **Company Background:** Registered in early 2023 as a "software development" business.
- **Location:** Multiple sources list the company's legal address in Saran, Kazakhstan.
- **The Critical Link:** The actor's VK profile lists Saran as their hometown, connecting them to the company's location.

Connecting the Dots

- **Recordings** of an AV/EDR bypass tool were found on the rogue system.
- These videos matched those sold by the user **KernelMode** on cybercrime forums.
- Demo recordings exposed a name ("**Andry**") and a **P-1 form** revealed a company name.
- We pivoted on these two data points to uncover the **actor's identity**.

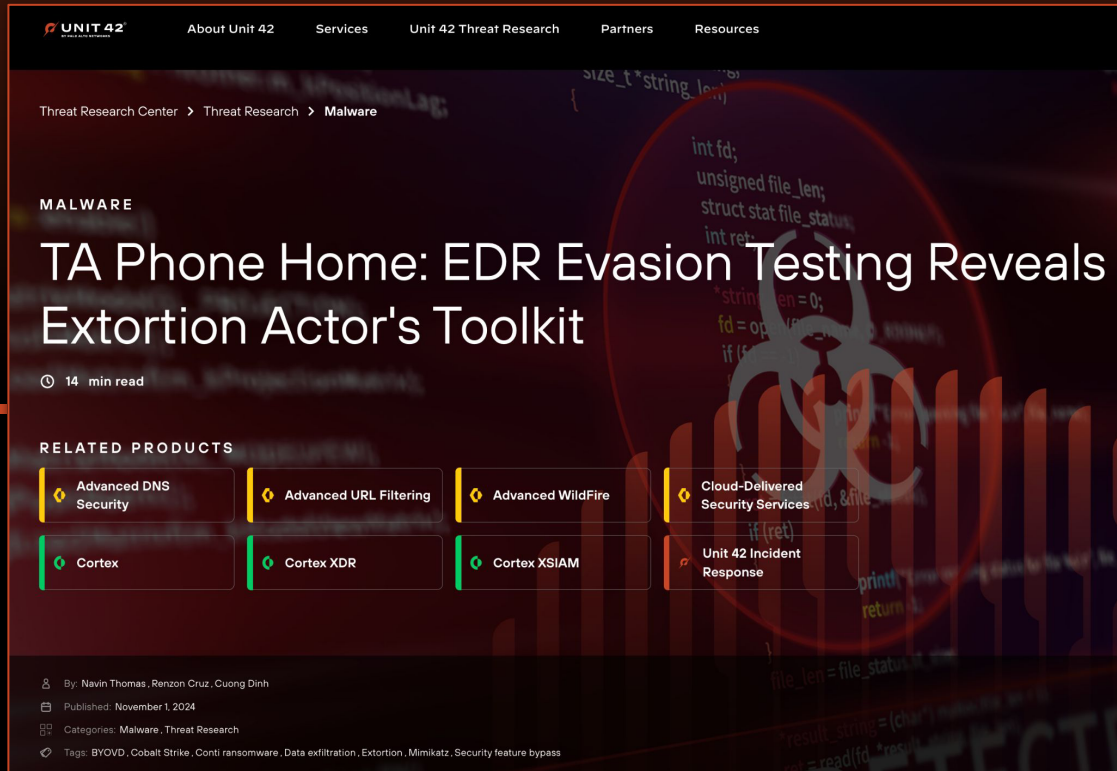

Assessment: The KernelMode Connection

- **Moderate Confidence:** The identified individual is the actor *KernelMode*.
- **Likely Role:** We believe they are also the **primary developer** of the AV/EDR bypass tool.
- **Caveat:** No evidence suggests the rogue system was used for anything beyond **testing** the AV/EDR bypass.

Thank You

paloaltonetworks.com

The screenshot shows the article page for "TA Phone Home: EDR Evasion Testing Reveals Extortion Actor's Toolkit" on the Palo Alto Networks Threat Research Center. The page includes a navigation bar with "UNIT 42" and links for "About Unit 42", "Services", "Unit 42 Threat Research", "Partners", and "Resources". The breadcrumb trail is "Threat Research Center > Threat Research > Malware". The article title is prominently displayed, followed by a "14 min read" indicator. A "RELATED PRODUCTS" section features seven product tiles: Advanced DNS Security, Advanced URL Filtering, Advanced WildFire, Cloud-Delivered Security Services, Cortex, Cortex XDR, Cortex XSIAM, and Unit 42 Incident Response. The author information at the bottom lists "By: Navin Thomas, Renzon Cruz, Cuong Dinh", the publication date "November 1, 2024", categories "Malware, Threat Research", and tags "BYOVD, Cobalt Strike, Conti ransomware, Data exfiltration, Extortion, Mimikatz, Security feature bypass". The background of the screenshot features a dark theme with a biohazard symbol and snippets of C++ code.
