

A man in a dark suit and light-colored shirt is looking intently at a server rack. In the foreground, a Fortinet FortiGate 2000B network device is visible, showing its various ports and the Fortinet logo. The background is a blurred server room with other racks.

FORTINET

Mobile Applications: a Backdoor into Internet of Things?

Axelle Aprville - FortiGuard Labs, Fortinet

October 2016

How would YOU reverse engineer IoT?

A solution for AV analysts & software security researchers

Example 1: Connected toothbrush

Example 2: Sony Smart Watch 2

Example 3: House alarm

Conclusion

That's your new task

How are you going to reverse it?

1/5 - Browse the web for documentation

The image shows a composite of three screenshots from different websites. On the left is the Sony Developer World page for SmartWatch 2, featuring a 'Get Started' button. In the center is a screenshot of the xda-developers forum page for the Sony Smartwatch 2, which includes a 'Win an Honor!' contest banner and a 'Quick facts' box. On the right is a detailed technical specifications table for the Sony Smartwatch 2.

Quick facts

- Operating system : Micrium uC/OS-II

Category	Feature	Value
NETWORK	Technology	No cellular connectivity
	LAUNCH	Announced
BODY	Status	Available Released 2013, October
	Dimensions	42 x 41 x 9 mm (1.65 x 1.61 x 0.35 in)
	Weight	122.5 g (4.34 oz)
	Build	Aluminum
	SIM	No
DISPLAY	Type	Capacitive touchscreen
	Size	1.6 inches (~46.8% screen-to-body ratio)
	Resolution	220 x 176 pixels (~176 ppi pixel density)
	Multitouch	Yes
PLATFORM	OS	Android OS compatible
	MEMORY	Card slot
CAMERA		No
SOUND	Alert types	Vibration; MP3, WAV ringtones
	Loudspeaker	Yes
COMMS	3.5mm jack	No
	WLAN	No
	Bluetooth	v3.0
	GPS	No

5/5 - Develop a smart app for tests

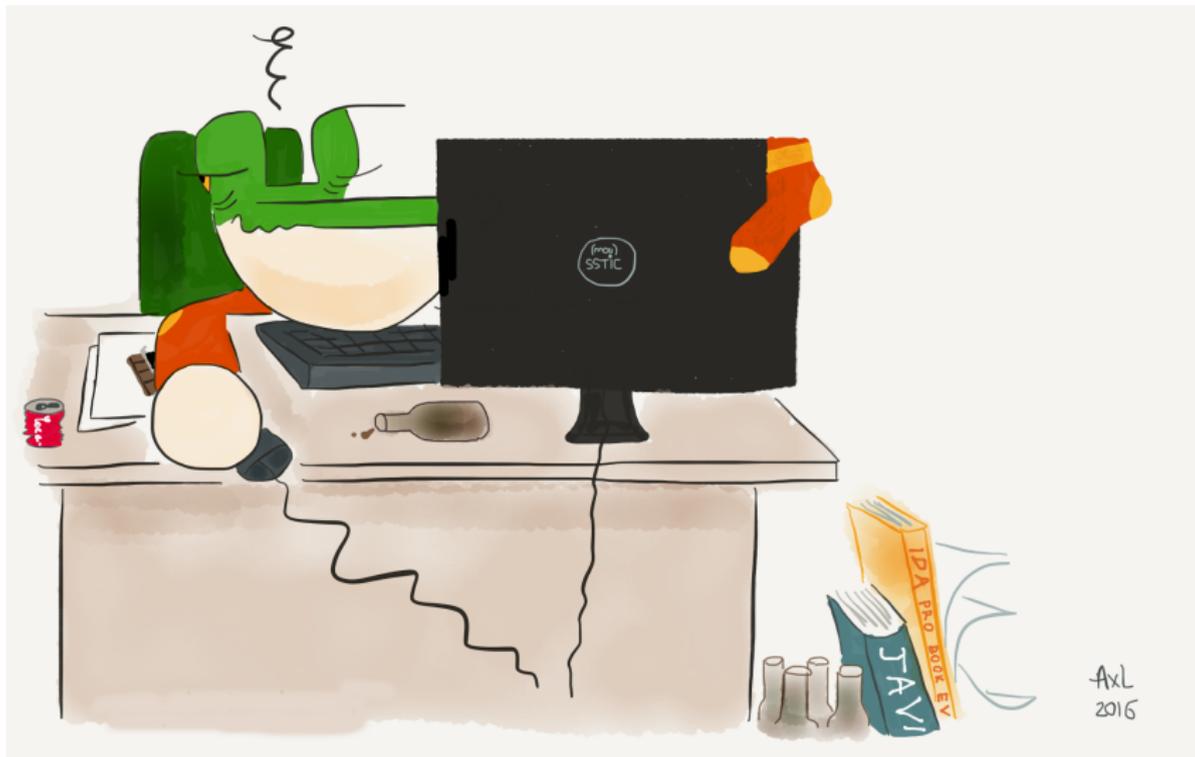

```
SmartWatchSms.java
115
116 @Override
117 public void onActiveLowPowerModeChange(boolean lowPowerModeOn) {
118     mIsInActiveLowPower = lowPowerModeOn;
119     Log.d(SmartWatchExtensionService.LOG_TAG, "onActiveLowPowerModeChange: lowPower="
120         + mIsInActiveLowPower
121         + " powerButton=" + mPowerButtonPressed
122     );
123     sendText(R.id.tv_explanation, "Touch screen");
124     if (mIsInActiveLowPower) {
125         sendText(R.id.tv_title, "Press to leave Active Low Power mode");
126     } else {
127         sendText(R.id.tv_title, "Press to enter Active Low Power mode");
128     }
129     mPowerButtonPressed = false;
130 }
131
132 private void setupClickables(Context context) {
133     LayoutInflater inflater = (LayoutInflater) context
134         .getSystemService(Context.LAYOUT_INFLATER_SERVICE);
135     View layout = inflater.inflate(R.layout.sample_watch_screen, null);
136     mLayout = parseLayout(layout);
137     if (mLayout != null) {
138         ControlView mode = mLayout.findViewById(R.id.mode);
139         mode.setOnClickListener(new OnClickListener() {
140             @Override
141             public void onClick() {
142                 Log.d(SmartWatchExtensionService.LOG_TAG, "Power button pressed");
143                 mPowerButtonPressed = true;
144                 if (!mIsInActiveLowPower) {
145                     Log.d(SmartWatchExtensionService.LOG_TAG, "Requesting to switch to Active Low Power mode");
146                 }
147             }
148         });
149     }
150 }
```

The image shows a Sony smartwatch with a black strap. The screen displays a home screen with a blue background. At the top, it shows the time as 10:07 and a battery level indicator. Below the time, there are several app icons: a green icon with a white 'S', a white wrench and screwdriver icon, a red alarm clock icon, and a blue circular icon with a white 'S'. At the bottom of the screen, there are three navigation icons: a back arrow, a home button, and a three-dot menu icon.

emacc@galligator
SmartWatchSms.java 62% L127 Git-master (Java/I Abbrev) 10:28AM 0.32

It is feasible but...good luck

Now, reverse this one!

No. Your experience with the smart watch
won't help.

Different architecture

Different hardware

Different protocols

You'll be starting from scratch again!

How would YOU reverse engineer IoT?

A solution for AV analysts & software security researchers

Example 1: Connected toothbrush

Example 2: Sony Smart Watch 2

Example 3: House alarm

Conclusion

Is there an easier way to reverse?

Yes: reverse engineer the **mobile** app

Adapted from <http://picolecroco.free.fr/images/dessins/2013/pico-59-soude.jpg>

Most IoT come with their connected app

- ▶ Sony SmartWatch 2 has a mobile application (to install new extensions)
- ▶ Beam Toothbrush has a mobile application to track your brushing experience
- ▶ Fitbit Flex has a mobile application to see how fit you are
- ▶ Wilson X basketball has a mobile application to see how well you score
- ▶ etc

How would YOU reverse engineer IoT?

A solution for AV analysts & software security researchers

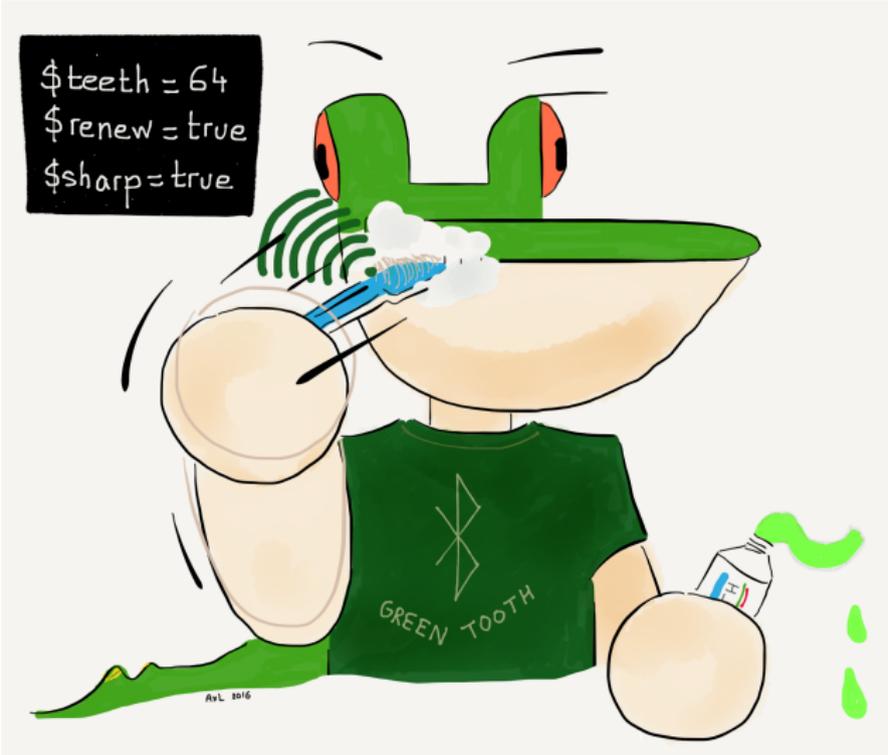

Example 1: Connected toothbrush

Example 2: Sony Smart Watch 2

Example 3: House alarm

Conclusion

Beam toothbrush

```

Classes, methods, fields: what we work out

Classes, methods, fields: what we work out

Remotely controlling the toothbrush

Uses Bluetooth Low Energy
Characteristics \approx entries to read and/or write

How? We get the UUID to access them in the code!

```
public void writeQuadrantBuzz(BLEDevice device, boolean arg6, boolean arg7) {  
    BluetoothGatt gatt = this.getBluetoothGatt(device);  
    if(gatt != null) {  
        this.send2charac(gatt, "04234F8E-75B0-4525-9A32-193D9C899D30", "19DC94FA-7BB3-4248-9B2D-1A0CC6437AF5",  
            ByteSerialize.boolean2byte(arg6, arg7));  
    }  
}  
  
public void setMotorSpeed(BLEDevice arg5, float arg6) {  
    BluetoothGatt v0 = this.getBluetoothGatt(arg5);  
    if(v0 != null) {  
        this.send2charac(v0, "04234F8E-75B0-4525-9A32-193D9C899D30", "833DA694-51C5-4418-B4A9-3482DE840AA8",  
            ByteSerialize.float2byte(arg6));  
    }  
}
```

Demo: remote control of motor speed

- ▶ Percentage to byte conversion: $((1 - \frac{x}{100}) * 139) + 69$
- ▶ Writing to toothbrush: BLE characteristic (833d...) found from RE

Demo: reading toothbrush battery level

- ▶ Byte to battery level formula: $100 * \frac{0.001221x - 1.1}{1.5 - 1.1}$
- ▶ 5 V for 12 bits = $\frac{5}{2^{12}}$
- ▶ 1.1 min voltage, 1.5 max voltage?

```
axelle@labtop ~/git-cuckoo/beam-brush/prog $ sudo python read-battery.py -v
===== Beam Brush Battery Level Utility =====
>read_battery(): handle=0x2f verbose=1
Connecting...
Connected
    GATT response: 704b
    Little Endian: 1207
    Returning: 93.4 percent
Disconnected
< read_battery()
Battery percentage 93.4
axelle@labtop ~/git-cuckoo/beam-brush/prog $
```

Sidenote: why should we care?

Who cares changing toothbrush motor speed?!

Who cares changing toothbrush motor speed?!

Two scenarios:

1. **DoS or Ransomware.** *“Your pocket money or I tell your mom you don't brush your teeth”*
2. **Propagating virus.** Infected BLE discovery responses?
Infected firmware?

Even harmless IoT need to be secured
With *Mirai* IoT botnet, attackers did not care about CCTV
cameras!

How would YOU reverse engineer IoT?

A solution for AV analysts & software security researchers

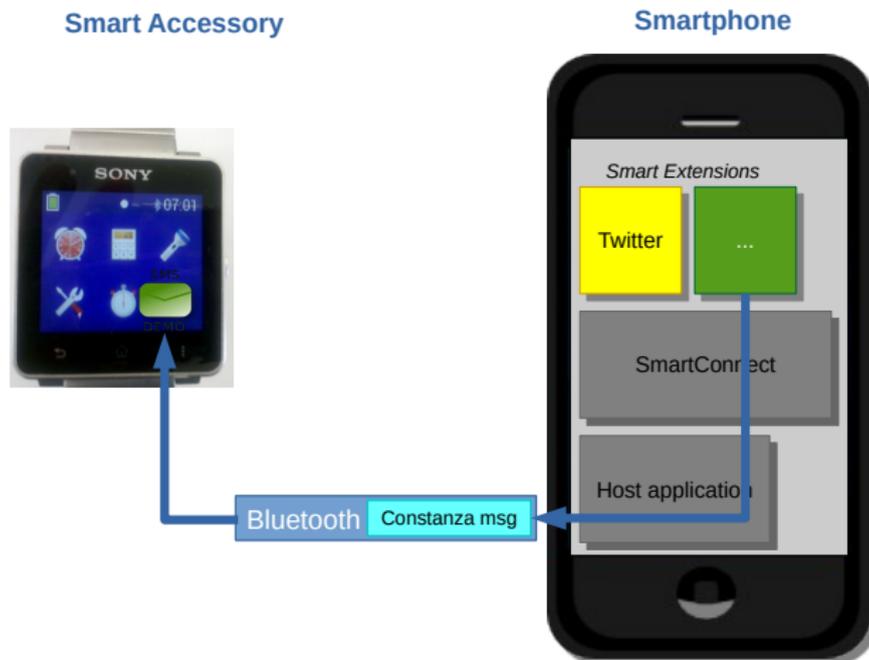

Example 1: Connected toothbrush

Example 2: Sony Smart Watch 2

Example 3: House alarm

Conclusion

Architecture

Reversing host app protocol

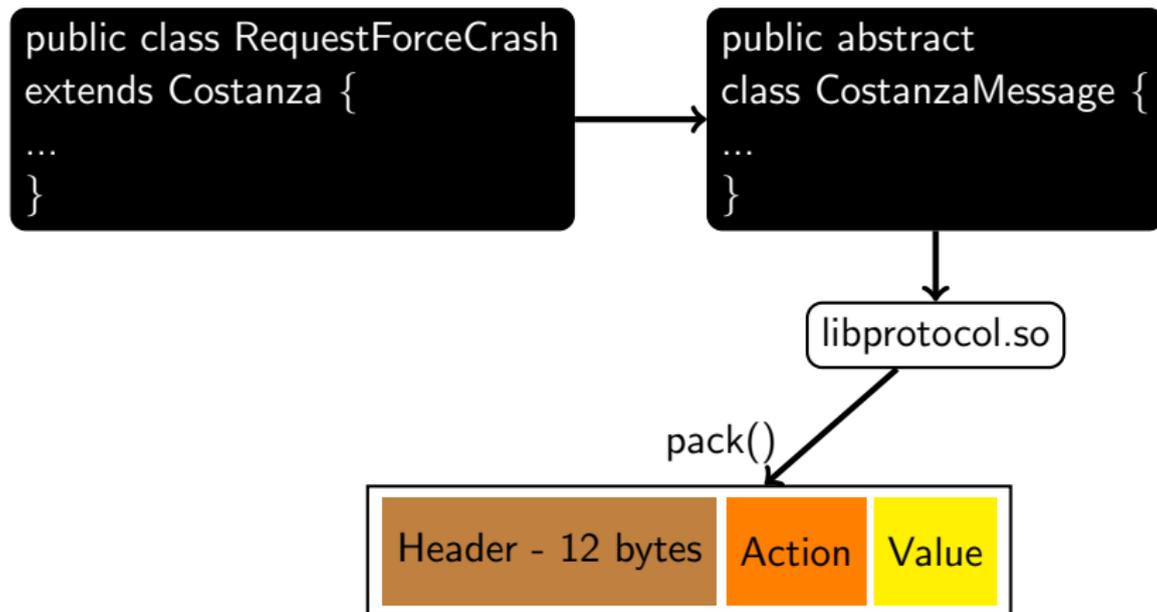

```
public class RequestForceCrash extends CostanzaMessage
    public static final int FORCE_CRASH_REQUEST_MAGIC
        = 0xC057A72A;
    private int mMagic;

    public RequestForceCrash(int newMessageId) {
        super(newMessageId);
        this.type = 666;
        this.mMagic = 0xC057A72A;
    }
```

666 → Number of the Beast

C057A72A → Costanza

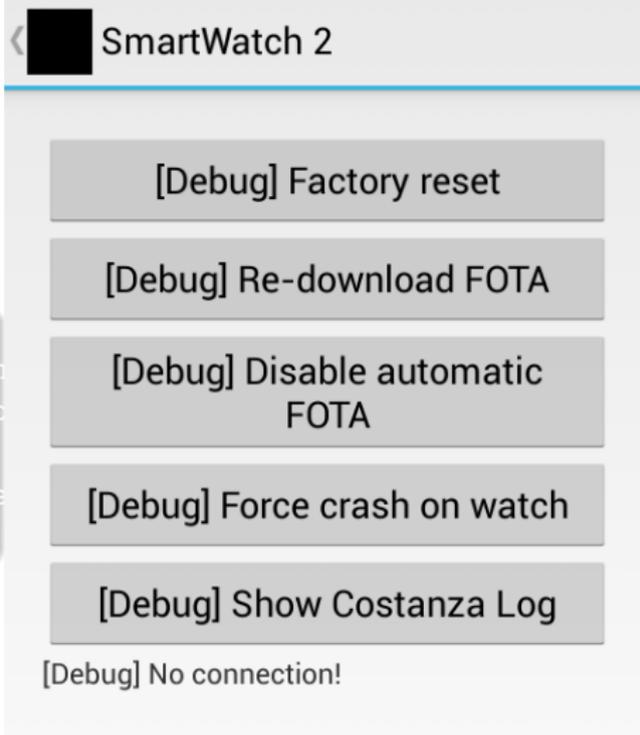

Sending Costanza messages

Hidden screen

RequestForceCrash packets are sent by a hidden activity!

```
$ su root
$ am start -n com.sonymobile.smartcom
  smartwatch2/com.sonymobile.smartcom
  hostapp.costanza.StartupActivity
Starting: Intent { cmp=com.sonymobile
```

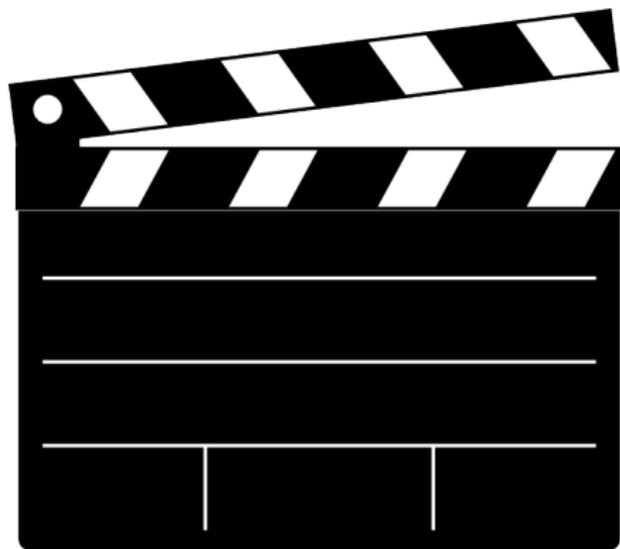

Debug command work

```
$ adb forward tcp:58616 tcp:58616
$ telnet localhost 58616
Trying 127.0.0.1...
Connected to localhost.
Escape character is '^]'.
Debug console for Costanza.
Connection will be closed when you leave the log
(hit the "Back" button on your phone.

Please issue commands:
```

How would YOU reverse engineer IoT?

A solution for AV analysts & software security researchers

Example 1: Connected toothbrush

Example 2: Sony Smart Watch 2

Example 3: House alarm

Conclusion

There's an Android app for the alarm

- ▶ Protect your house against burglars
- ▶ Controllable by SMS

But it's not very user friendly...

Comply to a strict SMS formatting

So, they created an **Android app** to assist end-users

Outbox is not secure

In the **outbox**, the SMS contains the **password** and **phone number** of the alarm.

You get it? You control the alarm!

Fake data, of course :D

Let's suppose you are a **wise person** and **erase the SMS**
You are wise, aren't you?

With the Android app, it's **worse!**

```
$ java DecryptParam ../reversing/[redacted]
== Melan parameters.txt decryptor PoC ==
Filename: ../reversing/[redacted]
Reading ../reversing/[redacted] as bytes:
xterm [-1, [redacted] 31, 0
      , 117, [redacted] 5, 0
      , 72, [redacted] 0, 77
      , 0, [redacted] 111
      , 0, [redacted] 0, 1
      06, 0 [redacted] 0, 0
      78, 0 [redacted] 0, 0
      66, 0 [redacted] 0, 0
      61, 0, 61, 0]
De-obfuscated [redacted] algorithm name: [redacted]
Decrypting
Phone Number      : 0120304050
Alarm Passcode    : 1234
Auto-control delay: 0
Emergency phone   : 0201030400
```

Weak protection for password: we can recover alarm's phone number, password, delay, emergency phone...

Your credentials are at risk even if you erased the SMS!

Without the app, **1** security issue.

With the app, **2** security issues !!!

How would YOU reverse engineer IoT?

A solution for AV analysts & software security researchers

Example 1: Connected toothbrush

Example 2: Sony Smart Watch 2

Example 3: House alarm

Conclusion

Thanks for your attention!

Thanks

Beam Technologies for providing a free user account for testing purposes.
